Monthly Insights

Macro developments over the past month have been overshadowed to some extent by the geopolitical tension related to Russia's stand-off with the West over Ukraine. Oil prices which rose briefly on the dispute have since fallen back, but risks remain that a more drawn out crisis could still see them move higher again posing risks for nascent recoveries, particularly in the Eurozone.

- Global macro: Geopolitical tensions have added fresh question marks about the sustainability of recoveries underway in various parts of the world. In broad terms the main risk from this dispute is that an extended period of geopolitical uncertainty could impact on investor, business and consumer confidence, at a time when recoveries are already in their early stages.
- GCC macro: The latest money supply and loan data signal improved liquidity in the UAE banking sector and accelerating private sector credit growth. To a large extent, this has been driven by the retail sector both on the deposit and loan side, reinforcing our view that the private sector will be the main engine of growth this year. Public sector borrowing has eased in Qatar over the last year, but in Saudi Arabia government spending appears to be increasingly financed by domestic credit.
- MENA macro: The tourism industries in MENA's net oil importers continue to suffer under the weight of regional political unrest. Since the start of 2014, elevated security risks and newly issued travel warnings have further deterred visitor arrivals, choking off a key source of export earnings in the process. Without a more fundamental improvement in the tourism sector, economies across the region are likely to see their balance of payments positions remain under strain, putting downward pressure on central banks' stock of FX reserves.
- Currencies: The last month has seen some steps forward and some steps back in terms of our key currency views, with signs that the US economy is coming out of its weather induced slowdown, but indications as well that the ECB is becoming more reluctant to ease monetary policy any further.
- Equities: Overall equity markets have had a positive month, with the MSCI World Index +3.1% 1m. In the latter half of February equity markets shrugged off earlier declines, which were driven by emerging market currency woes. However emerging markets concerns 'reemerged' at the beginning of March 2014, causing spikes in volatility, this time driven by geopolitical events on the borders of Europe, and concerns over China.

Global Macro

Global macro developments over the last month have to some extent been overshadowed by the resumption of geopolitical tensions, which have added fresh question marks about the sustainability of recoveries underway in various parts of the world. Chief amongst these have been related to events in the Ukraine. In broad terms the main risk from this dispute is that an extended period of geopolitical uncertainty could impact on investor, business and consumer confidence, at a time when recoveries are already in their early stages. Although an outright military conflict looks likely to be avoided, a period of escalating tit-for-tat sanctions could still have a damaging impact, in particular through reduced Russian oil and gas supplies which could ultimately lead to higher energy prices.

Geopolitical threats to growth

Europe would be most at risk from such a scenario as it is heavily dependent on supplies of Russian energy. Oil prices did indeed jump on the initial crisis in early March, but they have since subsided. However, an extended stand-off between the West and Russia could see a more sustained rise if the Russian government makes good on its threats to withhold supplies of oil and gas. As well as damaging business and consumer confidence, higher energy prices would quickly translate into higher inflation particularly in Europe. This may not be viewed as such a bad thing initially if it helps to push headline inflation closer to the ECB's 2.0% target. However, inflation caused by a supply shock is very different to that caused by rising demand, and the danger would be that when it unravels the deflationary consequences could be even worse than they are currently.

Although the size of the Ukraine and Russian economies are not significant in the context of the global economy (with Russia's annual GDP just USD2.2 trillion and Ukraine's USD180 billion), and also have relatively small trade flows with the Eurozone, other consequences may be felt through financial market linkages, especially between the European and Russian banking systems. Also there will be the need to backstop the Ukrainian economy which needs approximately USD25bn of assistance if it is to stay afloat, which may at the margin reduce the amount of money available to bailout other struggling European economies. The knock-on effects on Ukraine's neighbours, which include four EU members, could also be significant and are to some extent incalculable given the uncertainty that remains about how the crisis will ultimately play out.

ECB stays on hold

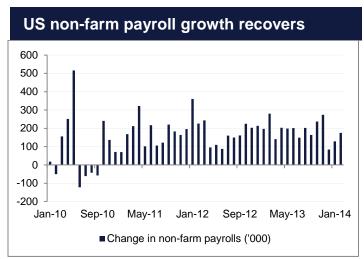

ECB President Draghi highlighted some of these risks at the ECB press conference following its monthly meeting earlier this month, in particular emphasizing the long term risks to energy prices as well as talking about the potentially 'substantial' and 'unforeseeable' consequences stemming from an extended geopolitical crisis in the region.

Despite these medium term risks, however, and the ongoing concerns about Eurozone deflation, the ECB decided to leave policy unchanged this month, contrary to many expectations (including our own) that some form of further easing might be announced. Indeed, such was the message from President Draghi that it is hard to envisage the circumstances in which a policy stimulus will now be considered, at least for a number of more months

The ECB emphasized the recovering momentum in the activity data around the turn of the year, raising its 2014 growth forecasts slightly to 1.2% from 1.1% previously. At the same time it downplayed the low current levels of inflation, arguing that inflation expectations remain anchored. Indeed it still sees inflation gradually recovering over the coming years to 1.7% in Q416. Although we still doubt that the economy will pick-up enough speed in coming months to meaningfully erode the spare capacity in the Eurozone economy, it will probably also take a few more months at least for the ECB to come to this view, leaving easing prospects for the time being off the table.

US begins to shake-off winter blues

More welcome news has come from the United States, however, where the February employment report supported the view that the recent slowdown in the US economy will prove temporary. February US payrolls surprised positively with 175k non-farm jobs created during the month, despite the continuation of bad weather during the sample period, and with small positive revisions to the previous two months. Although the unemployment rate ticked higher to 6.7% and the hours worked fell, this does not meaningfully take away from the strength in payrolls, which came after two months when they rose on average by only 115k (even after the upward revisions).

Source: Bloomberg, Emirates NBD Research

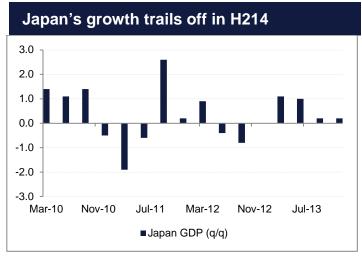

With other indicators also suggesting reviving momentum it should not be long before the 'weather effect' is behind us. That being the case, the Fed looks very likely to keep tapering in coming months, starting next week when another USD10bn reduction in QE is expected. The Fed's forward guidance looks likely to be refined as well, whereby it will probably place less emphasis on the 6.5%

numerical unemployment threshold and replace it with a broader range of employment measures that give a better indication of the amount of slack in the economy.

Japan's easing bias remains

Meanwhile in Asia the focus has been on the export slowdown in China and the downgrade to Japanese GDP growth which is keeping pressure on the both PBOC and the BoJ to maintain loose policies. The Bank of Japan concluded its March meeting this week with no change in monetary policy, maintaining its plan to expand the monetary base by JPY60-70 trillion per year. Q4 GDP growth was revised down from an original 0.3% estimate to an even more disappointing 0.2% outturn. This was largely expected, however, and the greater focus is now on Q1 GDP now where the evidence has been mixed. Although expectations are for a bounce back in growth, some of the more recent data has been worrying, showing the service sector PMI and auto sales both falling sharply in February, and the outlook component of the prominent Economy Watcher's Survey also collapsing in the same month. That may tell us more about Q2 risks but speculation is rising that that the BOJ will be forced to expand its QQE monetary stimulus (Quantitative and Qualitative Easing) following its VAT increase in early April. At the moment, the consensus expectation appears to favour such a move occurring in late Q2, especially following BOJ comments which suggested that monetary policy will be adjusted if the 2% inflation target starts to look out of reach.

China tightens credit, CNY declines

In China's case its growth target has been downgraded to 7.5% for this year, which is still higher than our own 7.0% estimate, and signals the difficult balancing act the Chinese government is facing in introducing financial sector reforms while maintaining a sufficient pace of growth to maintain employment levels and social stability. More tangible evidence of this has been evident in weak trade and inflation data and news of China's first corporate default. The latest Chinese money supply data also showed a slowdown in credit creation especially in the shadow banking sector, which again reflects the rising default risk in the Chinese corporate

sector. Such news along with heavier policy guidance may now start to slow the previous excessive demand for credit. It is in this context that the PBOC appears to be encouraging the CNY to depreciate, in line with our forecasts, in an attempt to offset the slowdown in growth resulting from tightening policies in other areas.

GCC Macro

The latest money supply and loan data signal improved liquidity in the UAE banking sector and accelerating private sector credit growth. To a large extent, this has been driven by the retail sector both on the deposit and loan side, reinforcing our view that the private sector will be the main engine of growth this year. Public sector borrowing has eased in Qatar over the last year, but in Saudi Arabia government spending appears to be increasingly financed by domestic credit.

Resident deposits drive UAE money growth

Broad money supply (M2) surged in Q4 2013 to reach 22.5% y/y in December, the fastest pace of growth since the financial crisis. The main driver appears to have been resident deposits, which increased 13% y/y last year, according to the central bank statement. Detailed data for the fourth quarter is not yet available, but data for Jan-Sep shows that resident individuals' deposits, which account for nearly 30% of total deposits, grew consistently between 10-12% y/y in the first three quarters. Private sector business deposits picked up over the summer, posting the strongest annual growth rates since 2011.

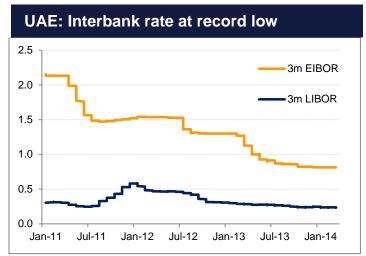

Source: Haver Analytics, Emirates NBD Research

On the lending side too, the private sector has likely been a key contributor to the acceleration in bank lending to 7.1% y/y in December 2013 from 2.6% in December 2012. The 'other' component of private sector loans, which includes personal loans for business and consumption purposes, accounts for more than a quarter of total bank lending and accelerated to 10.8% y/y in September 2013 from 1.5% the previous year. Government and public sector credit growth, which together account for 30% of total bank loans, is still relatively high at 8.3% y/y (September 2013), but has slowed since Q3 2012.

In our view, the recovery in retail deposits and borrowing reflects improved consumer confidence in the UAE's economic recovery, and should support increased consumption and SME investment this year. The relatively upbeat sentiment is also captured in the

PMI surveys year-to-date, which show continued strong expansion in the non-oil private sector, rising employment and increased purchasing activity in anticipation of future sales growth.

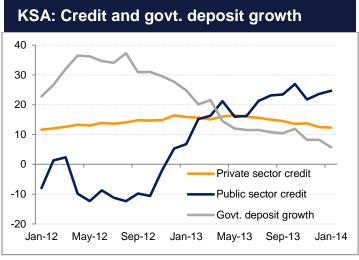

The improved liquidity in the UAE banking system in recent months is reflected in lower interbank rates – 3m EIBOR continued to ease in Q4 2013, and at 0.81% is the lowest on record. The spread between dirham and dollar 3m rates is also at its tightest since Q4 2008. With an upward bias to US rates as the Fed continues with 'tapering' of QE, we see little room for further declines in the 3m EIBOR rate.

Source: Bloomberg, Emirates NBD Research

Private credit growth slows in Saudi Arabia

In contrast to the UAE, private sector credit growth in Saudi Arabia has eased in recent months, slowing to 12.3% y/y in January, the weakest annual growth rate since February 2012. Consumer loan growth slowed to 14.6% in the fourth quarter last year, down from around 20% in 2012 and 1H 2013. However, real estate financing remains robust (25.6% y/y in Q4 2013). We expect this component of credit to continue to grow strongly this year, as earlier this month SAMA issued licenses to several of the major banks to provide real estate financing facilities and services.

Source: Haver Analytics, Emirates NBD Research

Government and public sector borrowing has accelerated in the Kingdom however, reaching 24.7% y/y in January from less than 7% a year ago. At the same time, government deposit growth has slowed, suggesting that public spending is being increasingly financed by bank loans rather than export revenues. Indeed, proceeds from oil exports would have eased in recent months as Saudi oil production has declined through Q4 2013 and in January-February 2014.

Construction drives private sector credit growth in Qatar

In Qatar, private sector credit growth has been broadly stable, averaging just under 15% last year. The strongest growth in lending has been to contractors, signaling activity in the construction sector. Borrowing to finance consumption spending has also accelerated. Government borrowing has slowed sharply from its peak of nearly 100% y/y in May 2012 to 9.7% in December 2013, before ticking up to 12.6% y/y in January.

MENA Macro

The tourism industries in MENA's net oil importers (Morocco, Tunisia, Egypt, Jordan and Lebanon) continue to be negatively affected by regional political unrest. Since the start of 2014, elevated security risks and newly issued travel warnings have further deterred visitor arrivals, choking off a key source of export earnings in the process. Without a more fundamental improvement in the tourism sector, economies across the region are likely to see their balance of payments positions remain under strain, putting downward pressure on central banks' stock of FX reserves.

In early March, Egyptian Tourism Minister Hisham Zazou said that Germany's extension of a travel warning for its citizens to resorts in Sinai had created a panic among tour agencies, and urged Berlin to reconsider its decision. Indeed, after German authorities recommended its citizens refrain from travelling to beach resorts on the peninsula, tour operators began bringing holidaymakers back to Europe from traditional resort destinations such as Sharm el-Sheikh. As Germans – alongside Russians – make up the largest share of holidaymakers in Egypt, a sudden halt in visitor arrivals from the European country will come as yet another setback for an industry that is still struggling to get back on its feet after several years of decline.

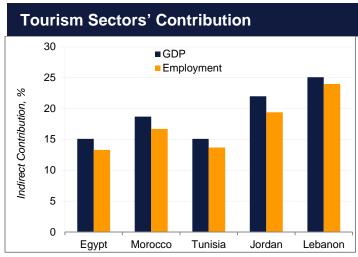

Source: Haver Analytics, Emirates NBD Research

This is not to suggest that Egypt is the only - or even worst - affected from a collapse in tourism revenues in recent years. On March 8, Lebanon's Tourism Minister Michel Pharoan said that the industry in his country was 'in a crisis situation', with current visitor numbers only 55% of 2010 levels. The hospitality sector in Lebanon has certainly been hit hard by the crisis in Syria, as the ongoing conflict was the catalyst for governments across the GCC to issue travel warnings to citizens to avoid visiting the region. According to previous statements from authorities, while tourists from the GCC account for only 10% of arrivals, they represent 40% of total spending, and their absence has thus resulted in a disproportionate impact on local consumption patterns.

A key job creator

Data from the World Travel and Tourism Council show that the hospitality sector accounts for almost a quarter of the Lebanese economy (indirectly), and employs a similar share of the workforce. The corresponding figures for the rest of MENA's net oil importers are shown in the accompanying chart, clearly highlighting how the industry is a major source of job creation across the region. Since the onset of political instability in 2011, visitor arrivals have declined across-the-board, which has weighed on headline growth and pushed unemployment higher.

Source: WTTC, Emirates NBD Research

Latest figures from national authorities highlight how no economy has been spared from the drop in visitor arrivals in recent years. In Jordan and Egypt, total tourist arrivals in 2013 were only 63% of 2010 levels. Even in Morocco, which has not been affected by large-scale public unrest on the same scale as its regional peers, revenues from the tourism sector were only 1.5% higher in 2013 compared to 2010.

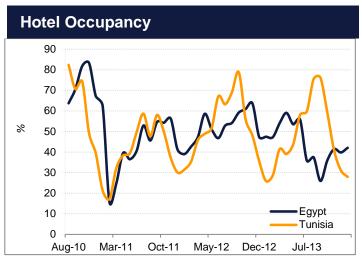

Not surprisingly, hotel occupancy rates and RevPAR have also come under pressure. In 2013, average occupancy rates in the region (excluding Egypt) were only 52%, down from 54% in 2012 and 59% in 2010. The impact on RevPAR has been more striking, with the regional average falling to only USD68 last year - the lowest level in our time series dating back to 2008. In Lebanon, RevPAR has collapsed since H213 amidst a deteriorating security environment, and averaged only USD75 in 2013, compared to USD145 in 2010.

Importance to BoP stability

The loss in tourism revenues in recent years has been a factor undermining the region's balance of payments position, putting downward pressure on central banks' stock of FX reserves. In the case of Egypt, we estimate the economy has lost over USD14bn in tourism export receipts since 2011. Having previously accounted for just under 25% of export earnings, we believe this loss resulted in a current account shortfall that was over USD5bn wider in FY2013 than it would otherwise have been had revenue growth proceeded at the pre-2011 pace. The story is broadly similar

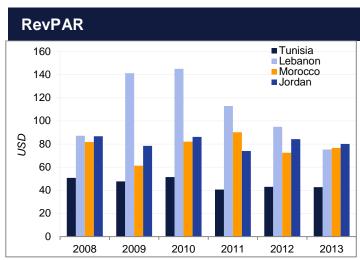

across the region, with tourism receipts accounting for 28% and 22% of total goods and services exports in Jordan and Morocco respectively, although only 11% in the case of Tunisia.

Source: STR Global, Emirates NBD Research

Looking ahead, it is difficult to see a fundamental improvement in the sector materializing in 2014. In Jordan and Lebanon, the ongoing conflict in Syria is likely to continue to deter visitors, while increased security risks in Egypt could actually see arrivals fall relative to 2013. Although we are slightly more optimistic on the prospects for North Africa's tourism industry, overexposure to the Eurozone – where economic growth will remain anemic for the foreseeable future – is tempering our enthusiasm.

Source: STR Global, Emirates NBD Research

Revisions this month

The only major forecast revision we have made this month is to our real GDP growth projection for Egypt. According to a statement by Finance Minister Hany Kadry in early March, the Egyptian economy expanded only 1.4% in FYQ2 (October-December). Although official figures have not yet been released, this marks only a marginal improvement on the 1.0% rate of growth posted in FYQ1 (July-September). As high-frequency survey data for January and February have shown a slight deceleration in private

sector activity at the start of 2014, there is little reason to believe FYQ3 will show any material improvement in headline growth. Certainly, the aforementioned travel warnings from European states poses a further downside risk in the near term. As a result, we have lowered our FY2013/14 real GDP growth forecast to 1.8%, from 2.8% previously.

Jean-Paul Pigat +971 4 230 7807

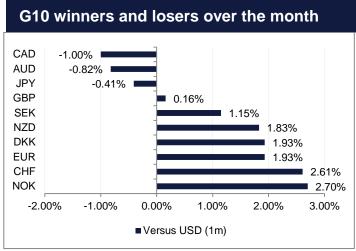

Currencies

The last month has seen some steps forward and some steps back in terms of our key currency views, with signs that the US economy is coming out of its weather induced slowdown, but indications as well that the ECB is becoming more reluctant to ease monetary policy any further. Overall, we retain our medium term bullish USD outlook but are shading it slightly in the coming months to reflect an ECB which is being unhelpful.

Steps forward, steps back

Events of the last month have reinforced some of our key FX views while some of our others have been partially undermined or at least challenged. To begin with the positives, the recent data from the US has encouraged our view that the slowdown in the US economy will prove temporary, thus lending support to our forecasts looking for a medium-term USD recovery. Most prominently of course, the February US employment report was surprisingly firm, with 175k non-farm jobs created during the month despite the continuation of bad weather during that month. With other indicators also suggesting reviving momentum it should not be long before the 'weather effect' is behind us. That being the case, the Fed looks very likely to keep tapering in coming months, starting next week when another USD10bn reduction in QE is expected. Although tapering has so far had a limited effect in terms of providing the USD with strength, we expect its impact to increase as QE gets closer to being completely unwound, and with the market then likely to begin considering the timetable for possible interest rate hikes.

Source: Bloomberg, Emirates NBD Research

ECB confounds expectations, again

The main challenge to our forecasts has come from the Eurozone and specifically the ECB. It is certainly not the first time that the ECB has confounded our hopes that it might ease monetary policy further, so we should not really be hugely surprised by the ECB's decision last week to leave policy unchanged. However, such was

the message from the ECB President Draghi that it is hard to envisage the circumstances in which a policy stimulus will now be considered, at least for a number of months. Most significantly perhaps from the EUR's point of view, Draghi also appeared to downplay the impact of the strong EUR on inflation, indicating that the 8% rise in the EUR's trade weighted index since 2012 has lowered inflation by just 0.4%.

Not surprisingly, the EUR benefited from the news, as well as from the arguments used to justify the lack of ECB action. Given the way in which the March meeting had been presented as a possible occasion to expect a policy change, it appears doubtful if much will change in the immediate future at least to justify a volte face. Although we still doubt that the economy will pick-up enough speed in coming months to meaningfully erode the spare capacity in the Eurozone economy, it will probably also take a few more months at least for the ECB to come to this view, leaving easing prospects for the time being off the table. As such, the EUR is likely to remain elevated in the coming months in the 1.35-1.40 range, and dependent largely on US developments for fresh direction. Accordingly we are shifting our EUR/USD forecast higher slightly over the forecast period (see page 23).

Risk aversion abates for now

Of course one of the main features of the last month has been the risk aversion that followed on from the revolution in Ukraine, which benefited traditional safe havens such as the JPY and the CHF, along with gold and US Treasuries. With risk aversion abating, however, over the last week it should not be surprising that both the JPY and the CHF have partially reversed these gains. While we would not rule out the re-escalation of that crisis, it seems unlikely if the West will step in with anything more than financial sanctions against Russia limiting the risk of a significant spillover. That being the case safety trades will probably continue to be unwound, with economic fundamentals returning as the main driver of these currencies.

Positioning still an obstacle to JPY losses

In terms of this, JPY weakness has been reinforced by data showing that Japanese economic activity slowed sharply in February (service sector PMI and auto sales), raising speculation that the BOJ will be forced to expand its QQE monetary stimulus (Quantitative and Qualitative Easing) following its VAT increase in early April. At the moment, the consensus expectation appears to favour such a move occurring in Q2, especially following BOJ comments which suggested that monetary policy will be adjusted if the 2% inflation target appears to look out of reach. BOJ Governor Kuroda's comments regarding the revival of the JPY carry-trade are also significant, highlighting the BOJ's preference for a steady depreciation of the Japanese currency.

The main obstacle to further JPY weakness is positioning, with CFTC data reporting extended short JPY positions since the start of 2014. Admittedly these have reduced a little over the last two months, but they would still seem to be sufficient to hinder a more dramatic depreciation of the JPY, especially in the context of expected repatriation flows approaching the end of the Japanese fiscal year (March).

Source: Bloomberg, Emirates NBD Research

SNB highlights importance of exchange rate peg

The Swiss authorities have also been challenged by safe-haven inflows into the CHF which are threatening to undermine the recovery in the Swiss economy, and reverse the recent increase in inflation. Indeed February's CPI report showed an unexpected drop in headline inflation back into negative territory, coming in at 0.1% y/y after a three consecutive months at 0.1%. With this backdrop the SNB will remain strongly committed to maintaining the EUR/CHF limit peg at 1.2000, which has been in place since September 2011 as a means to stem deflation risk. Indeed SNB President Thomas Jordan said that he would not rule out fresh measures to counter deflation, again referring to the possibility of negative interest rates and emphasizing the role the exchange rate peg currently plays as the cornerstone of Swiss monetary policy.

Source: Bloomberg, Emirates NBD Research

NZD outperformance, CAD underperformance

Amongst the main commodity currencies (AUD, NZD and CAD) the CAD still appears to be the weakest link amongst them as the Bank of Canada continues to highlight the risk of falling inflation, in contrast to the RBA which now appears more equivocal over the balance of monetary policy, and the RBNZ which appears likely to

raise interest rates soon for the first time in nearly four years. As a consequence, NZD should be the main winner overall in the coming month, although we prefer to express this through the crosses rather than in terms of the USD. The same approach applies to GBP strength, which we believe is more likely to be consistent against the EUR over the course of the year, rather than against the USD which we think is capable of recovering ground at the GBP's expense.

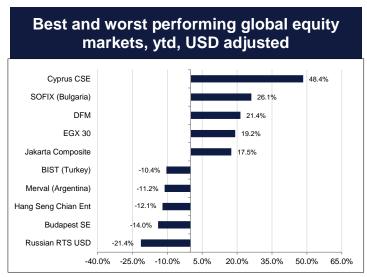

Tim Fox +9714 230 7800

Equities

Overall equity markets have had a positive month, with the MSCI World Index +3.1% 1m. In the latter half of February equity markets shrugged off earlier declines, which were driven by emerging market currency woes. However emerging markets concerns 'reemerged' at the beginning of March 2014, causing spikes in volatility, this time driven by geopolitical events on the borders of Europe, and concerns over China

Concerns over Crimea had an impact on both developed and emerging European equity markets, causing the VStoxx to jump +10.5% 1m to 20. European volatility has eased from its 1mo highs, as comments from President Putin eased concern about military escalation. Whilst volatility levels also spiked in the US and Asia on contagion fears, they eased as the US reported above consensus data on jobs and manufacturing, leading to the VIX -2.1% 1m to 14 and VHSI -4.5% 1m to 17. G7 markets led the gains for the MSCI sub-indices, with the MSCI G7 index +2.6% 1m, closely followed by the MSCI Emerging markets index +1.0% 1m. Frontier markets had a flat month with the MSCI Frontier markets index +0.5% 1m.

Source: Bloomberg, Emirates NBD Research

MENA Markets

MENA markets continued to rally with the S&P Pan Arab Composite index +2.8% 1m, with the rally being led by the Saudi and Egyptian markets, (Tadawul index +5.6% 1m, EGX 30 index +8.2% 1m). Trading volumes have eased on the DFM and ADX, with both indices entering sideways trading ranges, which could be maintained over the next month. Thereafter momentum could improve in the run up to the MSCI upgrade to emerging markets status. With the strong performance of MENA markets in 2013 being carried into 2014, MENA industry sectors continue to offer limited upside currently, based on Bloomberg consensus target prices and our equity universe.

Source: Bloomberg, Emirates NBD Research

Arabtec continues to go from strength to strength, with the company reporting it has reached an agreement worth c. AED 146bn, with Egypt's Defense Ministry, to develop and construct 1mn affordable housing units. Construction is expected to start in Q3 2014 and provide 1 million jobs. Based on Bloomberg consensus data, Arabtec is estimated to have a BEst 2013E net profit of AED 320mn on BEst sales of AED 7.08bn, implying a net income margin of 4.5%. Even if the profit margin on the Egyptian project is far lower than Arabtec's estimated net profit margin for 2013, the net profit from the project would be a multiple of 2013E net profit, further adding to revenue visibility overt the coming years. With this award, on top of the AED 20bn contract win from Aabar, execution risk for the company increases. Arabtec's plans to IPO 6 of its subsidiaries and use them as acquisitions vehicles mitigates some of this risk in part, as it should allow Arabtec to "acquire" management talent and execution capability.

Progress continued to be made in Saudi real estate market as the Saudi Arabian Monetary Agency (SAMA) issued licenses for real estate finance activities to National Commercial Bank, Al Rajhi, Bank Abilad, Samba, Banque Saudi Fransi and the Saudi Home Loans Company. The Saudi central bank is continuing to consider additional applications. Over the medium to long term this should prove positive for Saudi companies with large land banks such as Dar Al Arkan. According to Bloomberg consensus data Dar Al Arkan is trading on 0.7x BEst PB 2014E, compared to 1.5x and 1.4x for Emaar and Aldar respectively.

The MENA IPO pipeline continued to fill up with Saudi Arabia's National Commercial Bank announcing that it will seek regulatory approval for an IPO in Q3 2014. The Public Investment Fund, which has a 69.3% stake in NCB, plans to sell a 15% stake and allocate a further 10% to the Public Pension Agency. NCB's planned IPO would be the first Saudi bank IPO since 2008 and could be one of the largest regional IPOs in 2014. The bank has SAR 377.3bn in assets, and made profit of SAR 7.9bn in 2013, with a paid up capital of SAR 20bn. It owns 90.7% of NCB Capital and 66.3% of Turkiye Finans Katilim Bankasi. CAPM Investment announced that it is looking to arrange an IPO for Marka, which operates in the fashion retailing and the food and beverage

sectors, aiming to raise AED 275mn for a 55% stake in the company. The company aims to list on Dubai's DFM and this would be the first IPO since DSI, the construction firm, listed in 2009. Emirates Real Estate Investment Trust also announced its intention to float via an IPO on NASDAQ Dubai, aiming to raise AED 500mn (with a 15% greenshoe) from institutional investors. Mesaieed Petrochemical Holding Company (Mesaieed) IPO on the Qatar Exchange proved to be very successful, with the shares closing +450% at the end of the first day of trading. Separately, regional investment bank EFG Hermes also announced that it has a robust pipeline of IPOs for the Egyptian market.

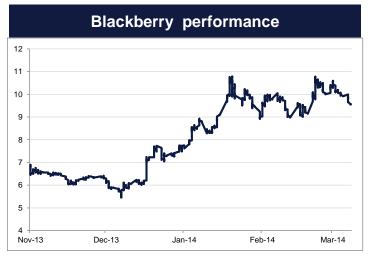

Qatar's QE Index dropped -2.0% last week, as Saudi Arabia, the UAE and Bahrain recalled their ambassador and envoys, following a disagreement over some of Qatar's regional policies. This disagreement is currently not expected to have any long-term implications for Qatari economic growth, and the market correction could be viewed as a buying opportunity by some investors, ahead of Qatar's upgrade to emerging markets status by the MSCI. Qatar did not recall its ambassadors and stated that it is "absolutely keen on brotherly ties between it and fellow brotherly people of the GCC."

Developed Markets

US markets rebounded, with the S&P 500 (+3.1% 1m) hitting new all-time highs of 1,883, spurred by positive data on employment and manufacturing. By way of contrast the Euro Stoxx 600 was flat (+0.5% 1m) on Crimea concerns and some weaker than expected earnings numbers. Germany's DAX fell -2.0% 1m index, on concerns of Germany's reliance on Russian gas supplies that are delivered through Ukraine, causing volatility to spike, with the VDAX +21% over the last 2 weeks.

Investors appear to have reacted favourably to John Chen's, (the new CEO of Blackberry), plans to turn the company around, with the shares up +32% ytd, outperforming Apple (-5.2% ytd) and Samsung (-3.8% ytd). Blackberry's turnaround plans are to focus on its core enterprise business and making money from selling server software more than from devices. Blackberry also intends to target emerging markets with new models, the Z3 and Q20, which are expected to be in stores in September 2014, and expected to retail at c.USD 200, far cheaper at than Apple's "low cost" iPhone 5C. Blackberry is also passing on part of its inventory risk to Foxconn, who will manufacture the devices, as part of a longer term plan to outsource manufacturing. Yet Blackberry's smartphone market share in the US, in terms of subscribers, remains way below that of Apple and Samsung, with Blackberry having a share of just 3.0% in Q4 2013, compared to 51.7% and 41.6% for Android and Apple respectively. T-Mobile recently ran a trade-in offer in the US for Blackberry customers a resulting in 94% of trade in customers switching platforms. The promotion is understandable from T-Mobile's perspective, as Blackberry devices tend to be more data efficient than iPhones, and so a platform switch would allow T -Mobile to sell more data, the growth segment for mobile telecoms operators. Despite the turnaround plans, Bloomberg consensus earnings estimates are projecting the company to continue to be loss making for several years, until 2017. The CEO has been remarkably candid in his

views, saying there was a 50:50 chance that his turnaround strategy would succeed, in an interview with the Financial Times. Nonetheless one of Blackberry's key strengths is its secure messaging service, which has been highlighted following the NSA eavesdropping scandal. The perceived value of messaging services is shown by Facebook's USD 19bn purchase of WhatsApp, compared to a market cap of just USD 5.0bn for Blackberry. In order to unlock this kind of value Blackberry would need to make its Blackberry messenger a cross platform product, an option the company has explored in the past.

Source: Bloomberg, Emirates NBD Research

Based on Bloomberg data for European 500 index, of the 291 companies that have reported Q4 2013 results, earnings growth has been strong, averaging +31%, led by technology companies reporting growth of +261%. Profits for consumer services companies have also proved to be very positive, with increases of +97%. On the revenue front the picture has not been as rosy with sales fairly flat, -0.8%. Overall so far, sales have been in line with Bloomberg estimates, whilst earnings have been -6.1% below, with the industrials sector missing Bloomberg consensus earnings estimates by -28% on average.

Emerging and Frontier Markets

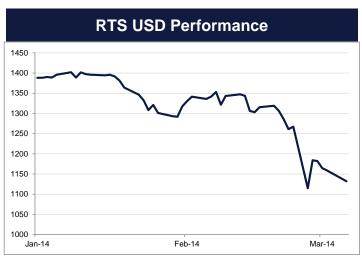

Issues in emerging and frontier markets persist, in the form of Fed tapering, a slowdown in Chinese manufacturing and a drop in exports, as well as the standoff between Russia and Ukraine. Whilst the Indonesia Jakarta Composite index (+5.1% 1m), India Sensex index (+7.8% 1m) and South Africa's JSE Africa index (+3.2% 1m) have shrugged of the last month currency driven weakness, the upcoming FOMC, (which could see another reduction in Fed stimulus of USD 10bn), could further impact the currencies of the "fragile five" and potentially result in further portfolio outflows from Indonesia, India, Brazil, Turkey and South Africa

China's onshore bond market saw its first default as Shanghai listed mid-cap Chaori Solar said it could only pay CNY 4mn of a CNY 89.8mn coupon on a CNY 1bn, 5 year bond, issued 2 years ago. The company avoided a loan default last year as the

Shanghai government persuaded the bank to defer its claims. This time no such help was forthcoming, in marked contrast to the bailout in January 2014 of a high yield product issued by China Credit Trust. This could be the first default of many, and the beginning of a squeeze on the shadow banking sector, as the number of non-financial companies with debt to equity ratios exceeding 200% has increased by 57% since 2007. If the slowdown in Chinese manufacturing persists, those sectors with high capital expenditure requirements and over capacity such as steel, non-ferrous metals and coal, could be the most at risk. The Chinese manufacturing slowdown is also impacting raw material producers such as copper producers. With growing stockpiles and an expected 2014 surplus of copper resulting in a -9.2% ytd fall in copper prices, and declines for copper producers (Antofagasta -4.0% 1m), the outlook for resource producers currently does not look bright, and could cause weakness throughout the emerging and frontier markets space for such companies (Vale -6.9% 1m, BHP -1.6% 1m). With a risk off move prevailing the Shanghai Composite index declined -4.8% 1m. The Chinese New Year holiday tend to impact data at the beginning of the year saw the next PMI release should help provide a clearer picture of the state of the Chinese manufacturing sector.

The standoff between Russia and the Ukraine has not escalated militarily, and there appears very little appetite in Europe for military involvement, given the potential threat of gas supplies being disrupted, and less so from the US and so fears of a broader conflict should abate. Russia could increase pressure on Ukraine by curtailing gas supplies, as it has done in the past, in 2006 and 2009, but in the short term this would have limited impact on Europe, given that winter is over and there are ample supplies to last several months. Over the longer term, whilst Russian gas is important for Europe, so are European hard currency payments for Russia, especially for Russia's largest company Gazprom.

Source: Bloomberg, Emirates NBD Research

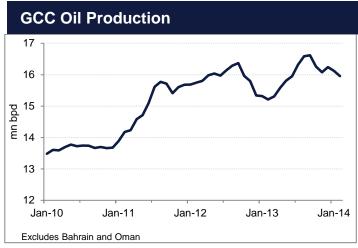

Ukraine's PFTS index dropped just -0.8% 5d, compared to -8.6% 5d for Russia's RTS dollar index. This is a reflection of a higher value of equities (both in percentage and absolute terms) held by foreign equity investors in Russia compared to Ukraine, as well as liquidity concerns. In 1998, when Russia defaulted on its GKO obligations, liquidity dried up in the equity market for several

months, an issue that investors still need to be cognisant of in 2014. According to Bloomberg consensus estimates Ukraine's PFTS index is trading on 4.7x PE 2014E, and Russia's RTS USD index is trading on 4.8x PE 2014E. Both markets appear to offer deep value but are cheap for a reason, as recent events have clearly demonstrated. The impact could be felt by Russia, and the earnings of Russian companies, if sanctions start to bite, especially on the financial front (as seen with Iran), and markets that appear cheap now could get cheaper still. Whilst the US is geographically distant from Ukraine, the Crimean crisis could impact US companies such as Exxon, which together with Royal Dutch Shell was planning to drill 2 wells 50 miles from Ukraine's south west coast, to explore the Skifska license, near Romania's substantial Domino field (which could turn Romania into a gas exporter). With the current situation, rights to explore the Skifska field are now in limbo.

What is a Reverse Convertible?

A Reverse Convertible is a structured product which allows the investor to benefit from a high return based on the view that the underlying will not decline below its initial level.

Mechanism

At maturity, there are 2 scenarios:

- If the underlying closes at or above its initial level, then investor receives 100% of the capital invested and the coupon
- If the underlying closes at or below its initial level, then investor receives 100% of the capital invested and the coupon minus the negative performance of the underlying from initial level. In this scenario, investor may incur capital loss.

Scenario analysis (ex: Aldar Reverse Convertible on 6 months):

- If Aldar is above its initial level in 6 months, then investor receives 100% + 10.90% = 110.90% of the capital invested
- If Aldar declined by -5% from the initial level in 6 months, then investor receives 100% + 10.90% 5% = 105.90% of the capital invested
- If Aldar declined by -20% from the initial level in 6 months, then investor receives 100% + 10.90% 20% = 90.90% of the capital invested

None of the content in the publication constitutes a solicitation, offer or recommendation by Emirates NBD to buy or sell any security, or represents the provision by Emirates NBD of investment advice or services regarding the profitability or suitability of any security or investment. Moreover, the content of the publication should not be considered legal, tax, accounting advice. The publication is not intended for use by, or distribution to, any person or entity in any jurisdiction or country where such use or distribution would be contrary to law or regulation. Accordingly, anything to the contrary herein set forth notwithstanding, Emirates NBD, its suppliers, agents, directors, officers, employees, representatives, successors, assigns, affiliates or subsidiaries shall not, directly or indirectly, be liable, in any way, to you or any other person for any: (a) inaccuracies or errors in or omissions from the publication including, but not limited to, quotes and financial data; (b) loss or damage arising from the use of the publication, including, but not limited to any investment decision occasioned thereby. (c) UNDER NO CIRCUMSTANCES, INCLUDING BUT NOT LIMITED TO NEGLIGENCE, SHALL EMIRATES NBD, ITS SUPPLIERS, AGENTS, DIRECTORS, OFFICERS, EMPLOYEES, REPRESENTATIVES, SUCCESSORS, ASSIGNS, AFFILIATES OR SUBSIDIARIES BE LIABLE TO YOU FOR DIRECT, INCIDENTAL, CONSEQUENTIAL, SPECIAL, PUNITIVE, OR EXEMPLARY DAMAGES EVEN IF EMIRATES NBD HAS BEEN ADVISED SPECIFICALLY OF THE POSSIBILITY OF SUCH DAMAGES, ARISING FROM THE USE OF THE PUBLICATION, INCLUDING BUT NOT LIMITED TO, LOSS OF REVENUE, OPPORTUNITY, OR ANTICIPATED PROFITS OR LOST BUSINESS. The information contained in the publication does not purport to contain all matters relevant to any particular investment or financial instrument and all statements as to future matters are not guaranteed to be accurate. Anyone proposing to rely on or use the information contained in the publication should independently verify and check the accuracy, completeness, reliability and s

Emirates NBD and its group entities (together and separately, "Emirates NBD") does and may at any time solicit or provide commercial banking, investment banking, credit, advisory or other services to the companies covered in its reports. As a result, recipients of this report should be aware that any or all of the foregoing services may at times give rise to a conflict of interest that could affect the objectivity of this report.

The securities covered by this report may not be suitable for all types of investors. The report does not take into account the investment objectives, financial situations and specific needs of recipients.

Data included in the publication may rely on models that do not reflect or take into account all potentially significant factors such as market risk, liquidity risk and credit risk. Emirates NBD may use different models, make valuation adjustments, or use different methodologies when determining prices at which Emirates NBD is willing to trade financial instruments and/or when valuing its own inventory positions for its books and records. In receiving the publication, you acknowledge and agree that there are risks associated with investment activities. Moreover, you acknowledge in receiving the publication that the responsibility to obtain and carefully read and understand the content of documents relating to any investment activity described in the publication and to seek separate, independent financial advice if required to assess whether a particular investment activity described herein is suitable, lies exclusively with you. You acknowledge and agree that past investment performance is not indicative of the future performance results of any investment and that the information contained herein is not to be used as an indication for the future performance of any investment activity. You acknowledge that the publication has been developed, compiled, prepared, revised, selected, and arranged by Emirates NBD and others (including certain other information sources) through the application of methods and standards of judgment developed and applied through the expenditure of substantial time, effort, and money and constitutes valuable intellectual property of Emirates NBD and such others. All present and future rights in and to trade secrets, patents, copyrights, trademarks, service marks, know-how, and other proprietary rights of any type under the laws of any governmental authority, domestic or foreign, shall, as between you and Emirates NBD, at all times be and remain the sole and exclusive property of Emirates NBD and/or other lawful parties. Except as specifically permitted in writing, you acknowledge and agre
